

case study: UNISON

Former Scarborough UTC student Matt Duley has secured an apprenticeship with one of our main sponsors UNISON Ltd.

“I am currently an apprentice with Unison of Scarborough, who I was introduced to while I was a student at Scarborough UTC and studying there helped me get the interview without doubt. I chose to study at Scarborough UTC because the engineering courses that they were offering were unique and fitted in with my future aspirations for being an engineer.

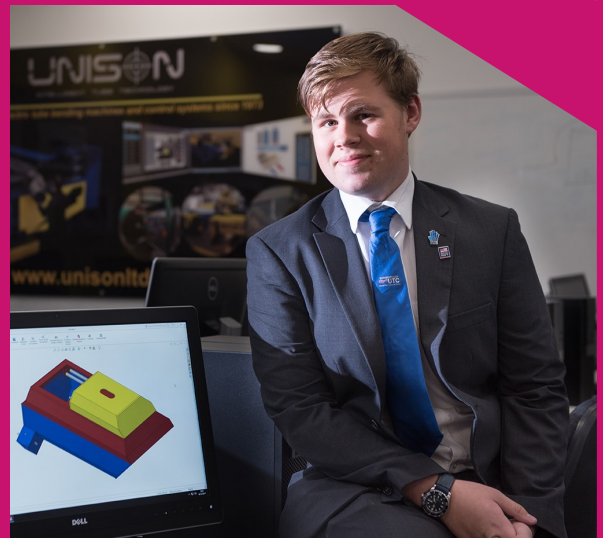

Some of the biggest highlights were getting to work on the projects with people in my class and year group and with the people from industry, like Unison, who came in to help out during classes. The opportunity to work closely with employers is something very different to what other education providers offer. During my time at Scarborough UTC I learnt you can only get as much out of something as you are willing to put in yourself and the work ethic instilled in me by Scarborough UTC, making sure I got work done on time and to the best standard I could, has helped me to gain this opportunity.”

UNISON
INTELLIGENT TUBE TECHNOLOGY

Alan Pickering - UNISON Ltd Director:

“We have been involved since day 1, with the development of the UTC, sponsoring the CAD suite and conducting weekly masterclasses with students on-site. We have a real shortage in electrical and mechanical design skills along with systems and control software. Working with the UTC enables us to influence what the kids are taught so that together we ensure they are industry ready. We continue to be blown away by the quality of students and intend to take a couple of apprentices a year as well as work placements and potential sponsorship through University.”
